

CLAIMS

1. A small dimension throwaway turbine device for the checking of the breathing flux, *characterized in* only three components realized in one single printing and injection production phase out of plastic material, making use of always the same raw material:
 - a mono-block mobile equipment or blade (2), out of plastic material;
 - a turbo-turbine (4) with an inlet deflector (1) and an outlet deflector (3), in which the mobile equipment consists of one single piece that comprises said blade (2) and the rotation axis (5).
2. A throwaway device according to claim 1, *characterized in* an axis of the mono-block mobile equipment having a truncated-cone structure, bevelled at the two ends with a 45° angle, so that the housing of the rotation axis of said blade (2) is realized in two cavities or seats obtained directly in said deflectors.
3. A device according to claim 1, *characterized in that* said turbine is realized in one single production phase, making use of one single raw material.
